

● AGENT-ASSISTED DISCOVERY & EXTRACTION

STEP 1

2

search streams

Scope & boundary

Two parallel streams: data centres and comparator assets; coded to a six-layer employment boundary.

STEP 2

~591

DOI-verified
raw records

Agentic deep search

Grounded LLM retrieval with citation snowballing. Every DOI verified against Crossref, OpenAlex, DataCite and Zenodo.

STEP 3

36

in-scope full-text
documents

4,545 candidate
mentions

Automated metric extraction

Captured value, unit, phase, scope and verbatim source quote.

● HUMAN REVIEW & HARMONISATION GATE

STEP 4

62

citable core rows

4,545 → 116 → 62

Human review & screening

Mentions scored against source quotations, de-duplicated and harmonised into one comparative schema.

STEP 5

44

corrected metric
rows

100% human-review gate
34/44 source checks complete

Correction & harmonisation

Auditable pass; no new values. Normalised to common metrics and reported as ranges, not pooled.
